

Policy Document Review Checklist

✓	Checklist
	Find the relevant documents for the selected city. Possible documents include: Master Plans, Response Plans, and Emergency Management Plans.
	Review each document. Look for mentions of reliance on buildings or use of critical infrastructure for response and recovery efforts.
	Try to locate these buildings in your community/city. Schools, hospitals, government buildings, and other critical infrastructure.
	Summarize what you found and state why addressing vulnerable buildings is important to your community's response and recovery plan.
	Create a visual. Map the radius of vulnerable buildings and overlay with point data. One color when critical building is vulnerable, another when critical building is within radius of vulnerable building.
	Share what you've learned. Present to policy makers. Send summary to concrete coalition and we'll post them on the website to share.
