

Visual Categorization Checklist

✓	Checklist
	Select the best photo for each building in your inventory and place them in a single folder. (develop a file name convention to keep things organized)
	Determine if there are any types of buildings that are not of concern.
	Categorize the buildings. Look for visual patterns in building construction, categories will develop organically as you view the photos. When you see similar buildings place them in a new folder and call them a category.
